

DETBOT

Milestone 3

Grupo nº12
Projeto nº13

Context

there is a wide variety of sites, portals and communication services that contain different types of information.

there is a need to create an agent that answers any question about the department correctly

Our Product

“This project aims to develop a DETI Bot agent that leverages both Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) to monitor and index all relevant data sources pertaining to departmental activities. The bot will offer diverse interfaces for the community to seamlessly interact with this information.”

from “Project planning tasks” slides

Main Functionalities

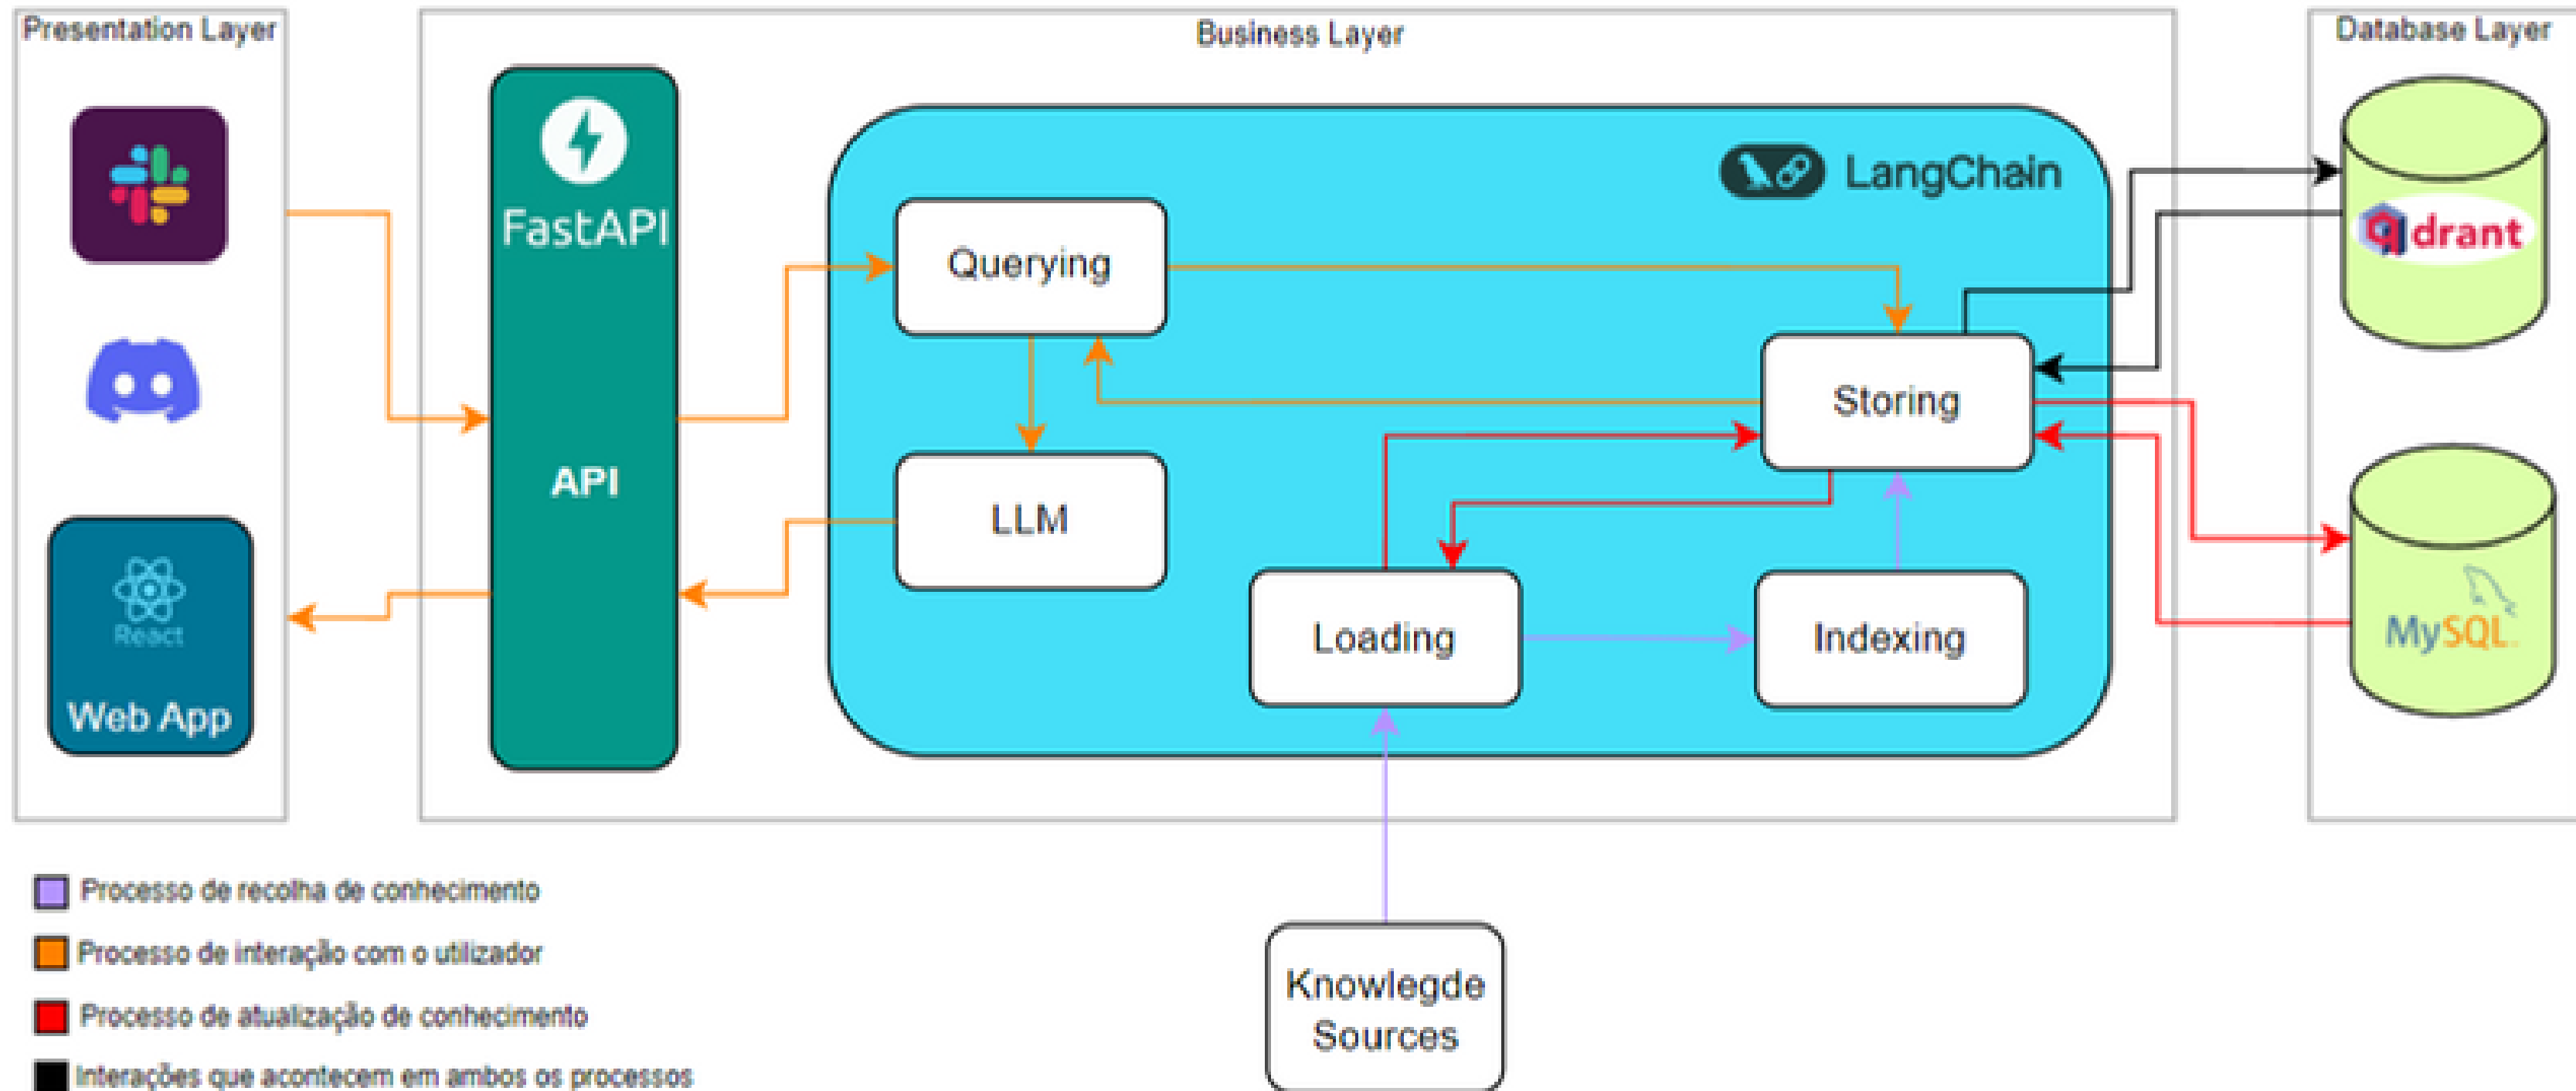

Students need to know about events, room locations, schedules, services

Professors need to know of events, educational files, administrative contacts, research groups, and projects

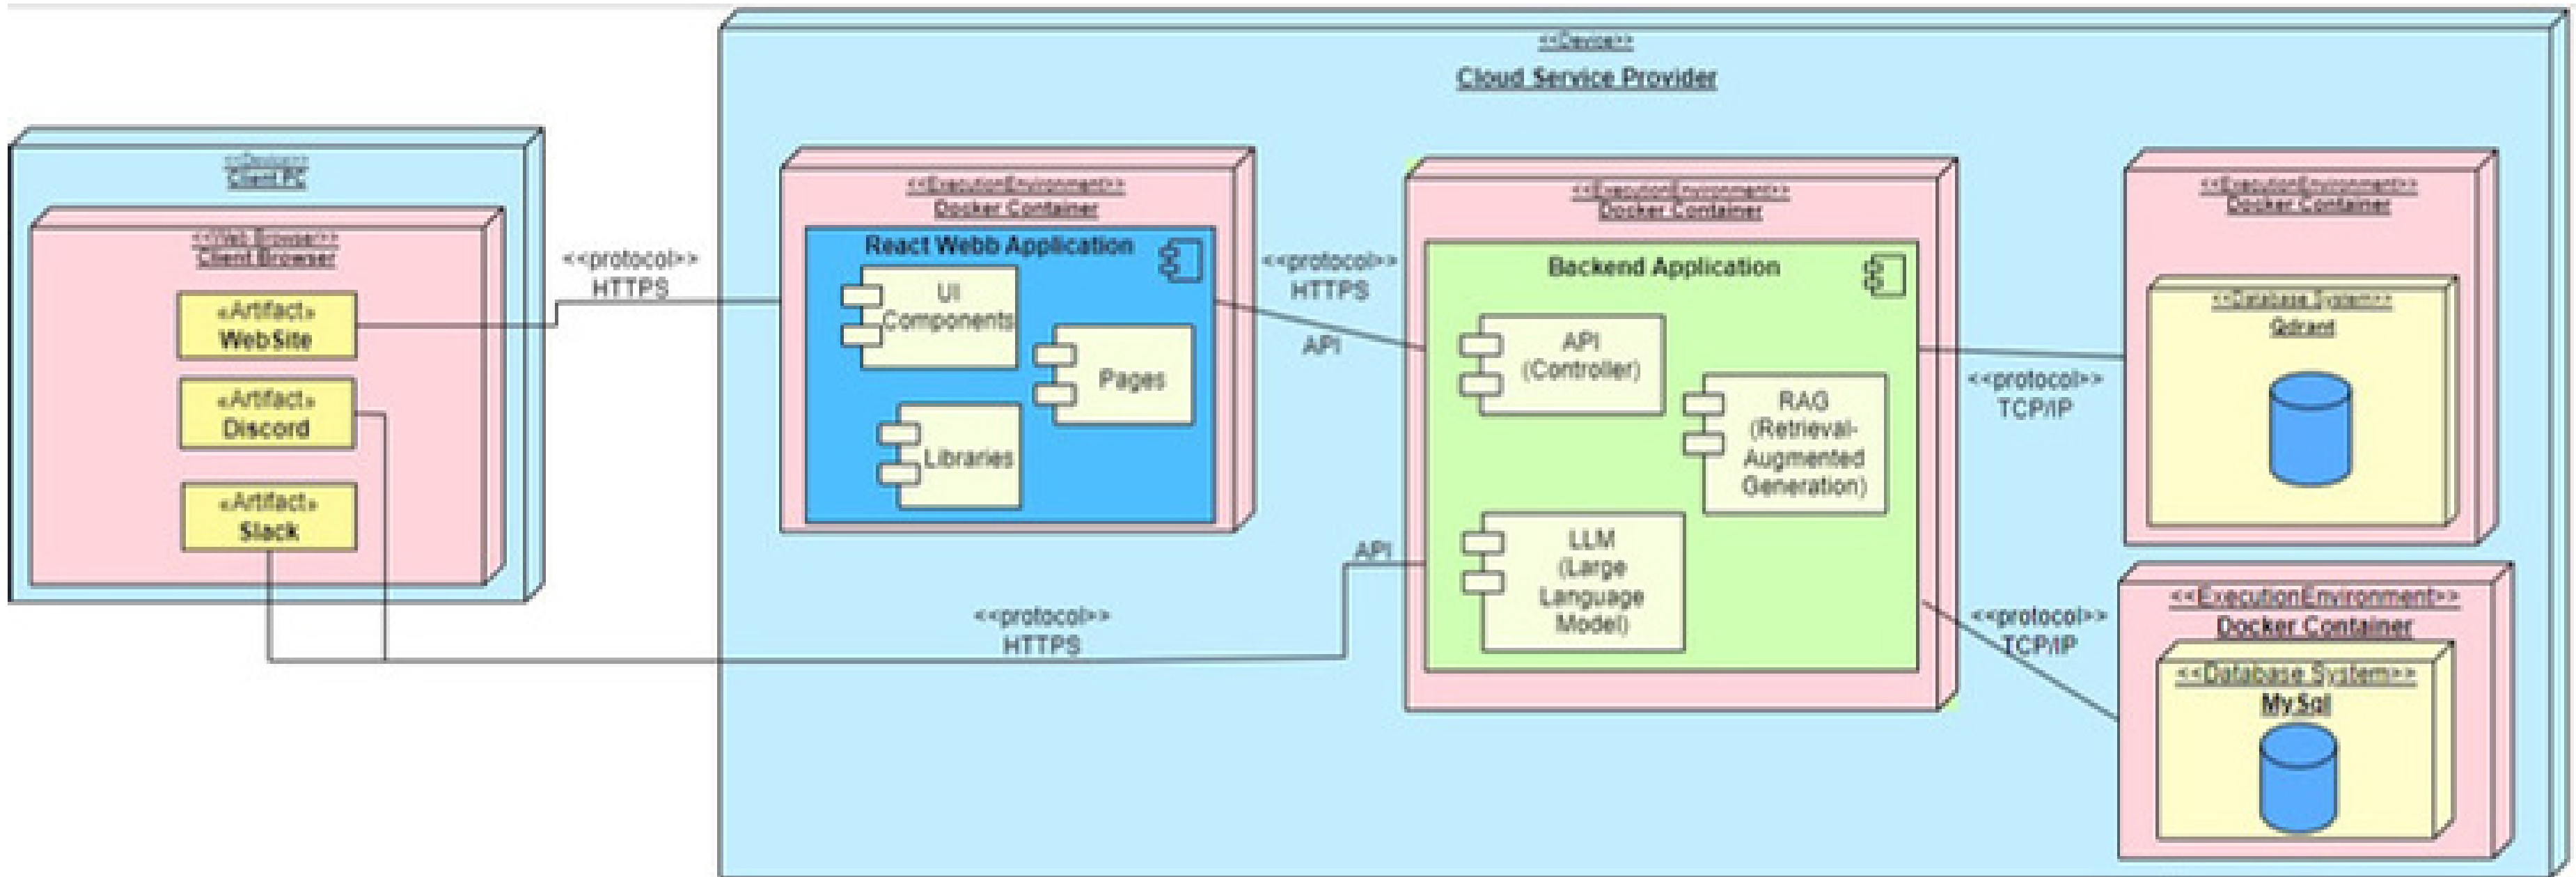

Staff need easy access to different DETI contacts

Visitors need to see DETI presentation, demos, projects, and events open to the public

Updated System Architecture

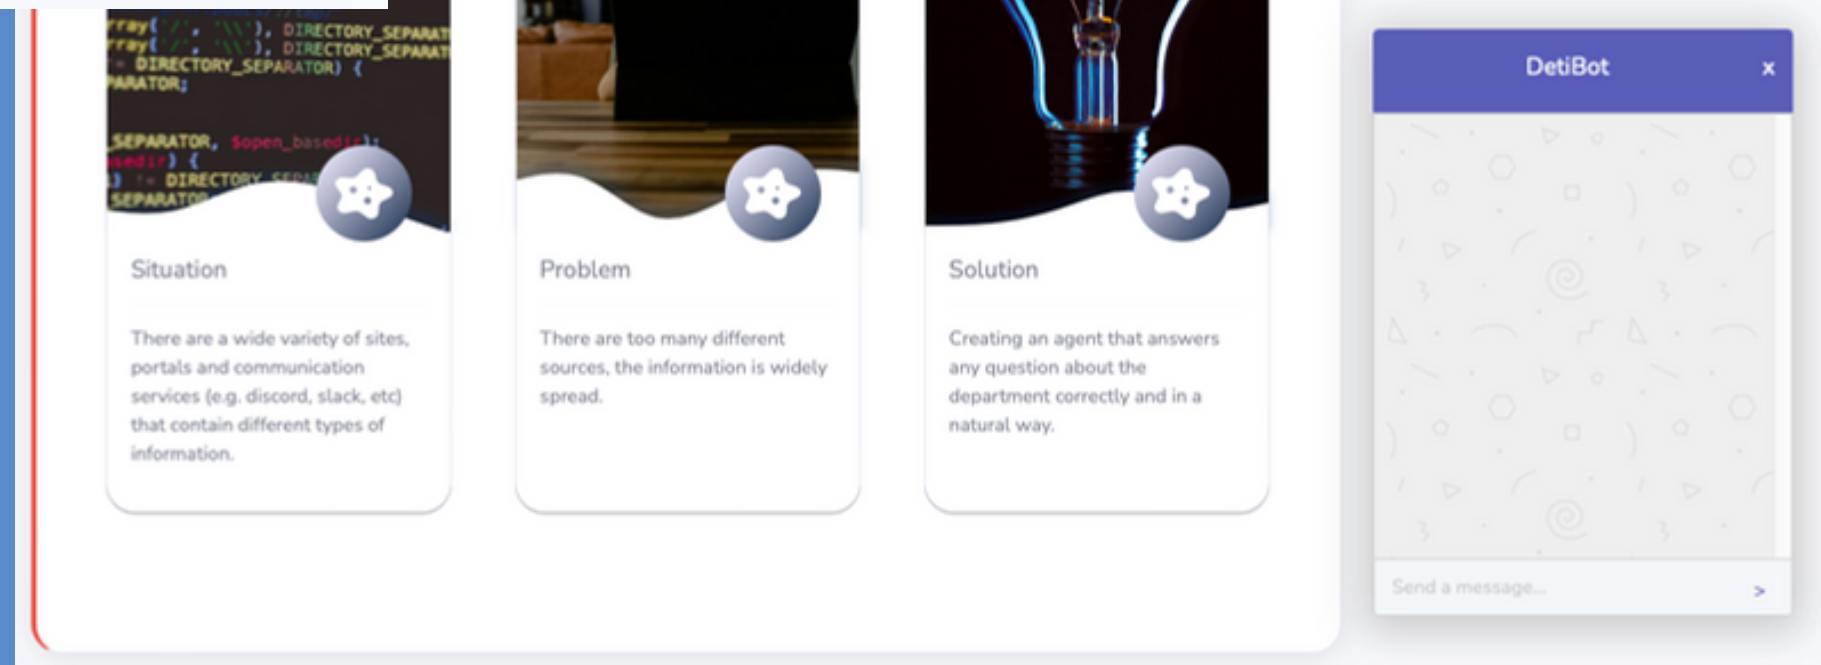

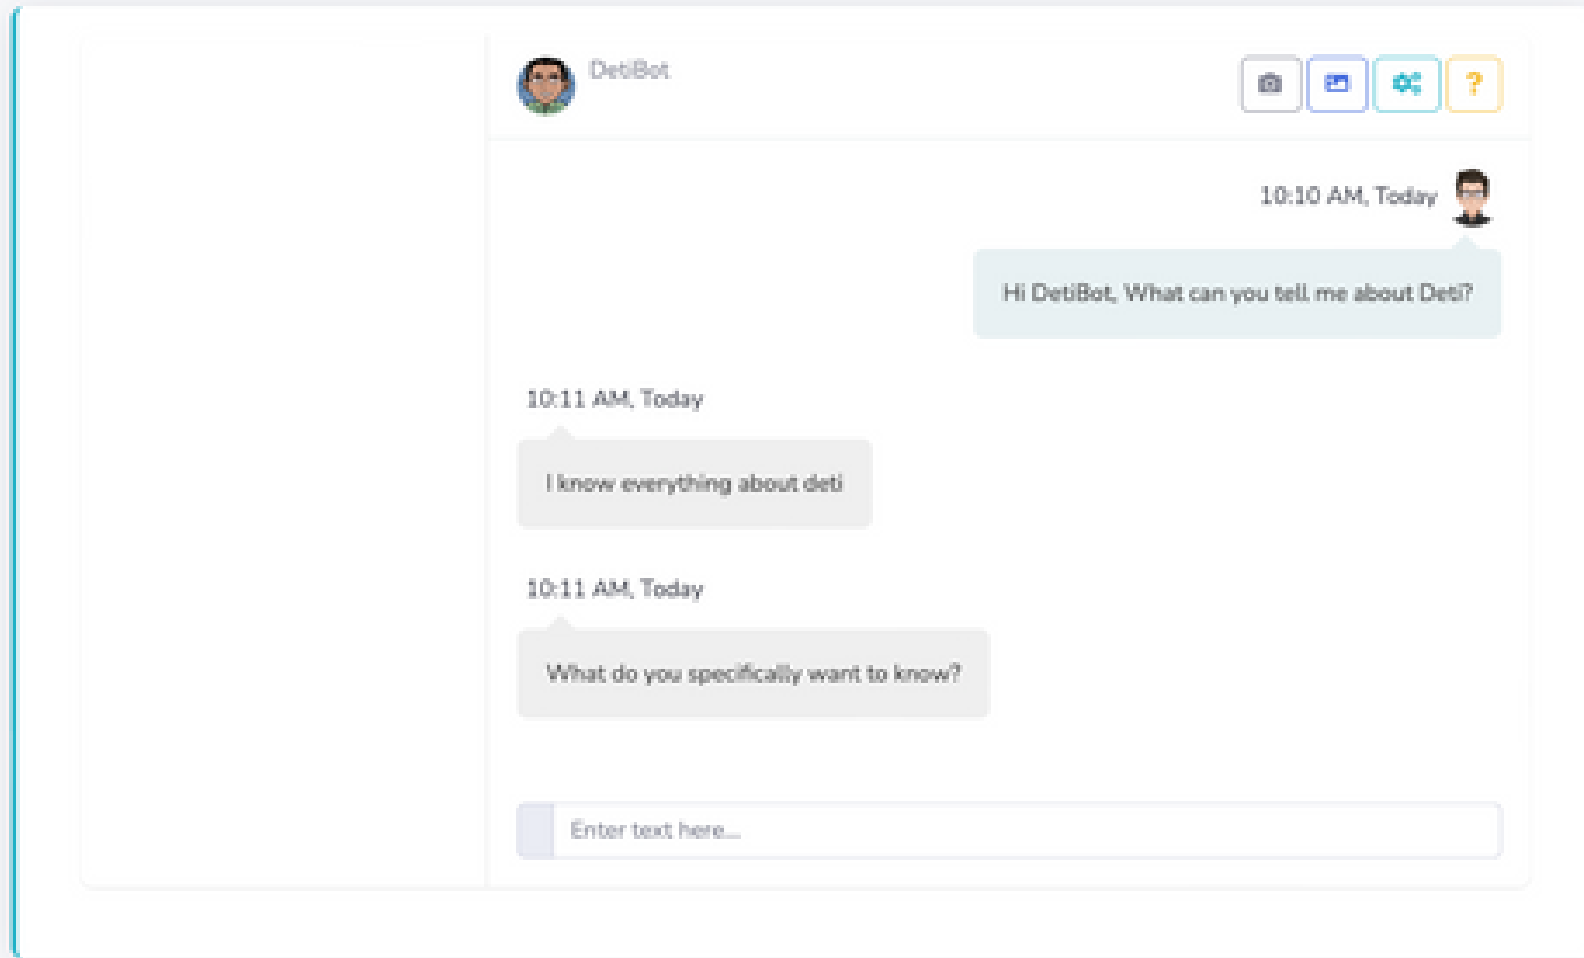

Updated Deployment Diagram

PROTOTYPE

Next Steps

- QA testing
 - Fine tune RAG and LLM
 - Deploy OpenLLM on a DETI server
 - Improve Frontend
 - Add Upload files capability on the administrative side
-
